20.5 January Release Items

1/27/2021

1 Summary

Below are the included items in the January Release of the API, CR, NG, and Portal applications.

- Updated Banner to Acquisition Data and Analytics: IPM Division on all sites.
- Added new Admin Submission Review (ASR) script report to identify issues with submissions flagged for review.
- Help Desk app was updated to add reports for Policy IIR. Export to Excel and Clear Buttons added to all pages.
- Added DAVE ID field to Program Info and Search in Portal.
- Nightly Maintenance fix related to package creation.
- Numerous bug fixes in other areas (Portal, NG, and CR).

2 Site Changes

The primary changes in this release were made in association to a new feature in Help Desk to allow for IIR Policy issues. Other changes were made in an increased effort to address specific bug fixes and efficiency issues.

API

Added file download ability to Support Calls
Added Lookup tables for IIR.
Added HTTP Action to the API logging for error resolutions.

Auth

Adjusted image in banner to reflect new naming changes.

CR

Adjusted image in banner to reflect new naming changes.
Fixed some issues with filtering in the Analyst Home page.
Fixed an issue in the parser where wInsight files might not be recognized as including Format 4 data.
Fixed the issue on ContractDetail/SubmissionDetail that was causing 'Index out of rage' errors.

NG

Adjusted image in banner to reflect new naming changes.
Increased security measures put in place for calls to the API.
Fixed an issue on the new IIR page causing excessive time to load (only visible in production).
Fixed an issue where the NEW calls on IIR tab were limited to 25. Altered to be consistent with the grid.
Altered help desk tabs to have more consistent behavior for adding and filtering issues.
Adjusted the report names in help desk.
Add export button to all result tabs in help desk to download the grid results to a spreadsheet.

Portal

Adjusted image in banner to reflect new naming changes.
Fixed several exceptions on the NDA manager, and adjusted the behavior of the controls to avoid errors.
Added fields and logic to allow for entry of DAVE Id for programs.
Added a script report to show logical flagged columns for an individual submission triggered for review.

3 DB Changes

There were major schema changes to the EVM database, but only minor changes to most other databases.

- Primarily, the EVM and DCARCPortal databases, mostly to stored procedures.
- There is a minor adjustment to a stored procedure in the DCARCReporting database.
